

LAWN CARE PROGRAM

SPRING

A well-balanced granular fertilizer is applied to enrich the soil and help the grass plants start actively growing.

LATE SPRING

A slow release granular fertilizer is applied to promote color and continued health of the grass plants. This fertilizer will give your lawn the desired nutrients it will need to thrive in the summer heat and stress to come. A Pre- Emergent crabgrass control and a broadleaf weed control will also be applied at this time.

SUMMER

A slow release granular fertilizer is applied to promote color and thickness. Broadleaf weed control will be applied to eliminate any weeds that may be growing in the lawn.

MID-SUMMER

A slow release granular fertilizer will be applied to ensure optimal nutrition is provided to the grass plants. Also, broadleaf weed control will be applied to eliminate any actively growing weeds.

EARLY FALL

A slow release granular fertilizer will be applied to promote health and recovery of the grass plants from summer stress. Broadleaf weed control is applied to continue control over weeds and to promote a more weed free lawn the following spring.

LATE FALL/ WINTERIZATION

A well-balanced granular fertilizer is applied to promote a stronger and healthier root system. This application prepares your lawn for the harsh winter conditions to come. As well as preparing your lawn for winter this application will give your lawn a deep green color in the spring.
